

Front-End Developer Tech Assessment

Create a single page application which reads the API and display it in a news article format:

<https://www.todayonline.com/singapore/explainer-4-room-hdb-resale-flat-tampines-sold-s100000-january-whats-behind-such-outlier-sales-2403311>

JSON data:

You are free to make any sensible assumptions on which data should be used.

- article-2403311.json
- header.json
- sidebar.json

The news article should have the following components:

- Header menu
- Headline
- Byline
- Publication and Updated Dates
- Hero Image & Captions
- WhatsApp banner
- Article Body
- Read Also
- Tagged Topics
- Read More in Singapore widget
- Subscription widget
- WhatsApp widget
- Side Bar “You Might Like” / “Trending” widget
 - You may use sidebar.json for items in both “You Might Like” and “Trending”

Components to be skipped:

- Ads
- Side bar Recommended by Outbrain widget
- Footer
- Text-to-Speech Audio Player
- Loading of next article at the end of main article

Notes:

Please leverage modern front-end frameworks like Angular, Vue, React or any PHP Template Engines like Twig, Smarty, Blade, etc.

(please scroll to next page for more)

Success Criteria:

- Demonstrate ability to problem solve and deliver software in a timely fashion
- Demonstrate ability to generate clean and concise code and robust software design
- Demonstrate your professional skill - how you would approach it differently if it were a real-world project; include comments in your code for a high-level alternative approach to the task.
- **Note that completion of a task within a time frame is not essential for success.**
 - **Document what you have been able to achieve within the assigned time frame and steps to build / execute the shared solution.**
 - For uncompleted components, you may leave comments/readme to show how you would do it.
 - You may also leave comments/readme on improvements/changes if there's more time.
